DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite

for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention. The claim is alternative in nature. If the first option of the claim

is selected, the claim is not of dependent form. However if the second option is selected

the claim is dependent on claim 1, presenting a different combination from the first

option. It is also unclear as to what the phrase on the penultimate line beginning with

the word "has" is referring to.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Miller (4,889,039)
- 5. Miller shows a sliding structure (16) of a shaft member (12) that is retained slidably in a guide hole (22). A plurality of labyrinth grooves (18) are formed in both axial

end portions of the slide surface (figure 1) of the shaft member which are always in slidable contact with a side surface of the guide hole (22).

- 6. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Hofmann (6,283,389).
- 7. Hofmann shows an injector (1) which has a needle (7) inserted into a nozzle (13) supplied with a fuel for injection. The injector is made up of a shaft member (23) displaced in the axial direction to switch between fuel injection and termination of fuel injection. The injector has a structure (1) in which the needle (7) is retained slidably in a guide hole (17) formed in the nozzle wall (1). See option I presented in paragraph #2.

Conclusion

- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hill et al (3,721,163) discloses a teaching of using labyrinth groves on a slidable piston to enhance lubrication and reduce wear. Dhar (5,140,905) shows a piston (figure 1) with a plurality of labyrinth grooves 20 being retained slidable in a guide hole (12). Sakamoto et al (6,547,534) shows a slidable shaft with a plurality of labyrinth groves.
